

# Angel Embroidery

Items you will need:

- Fibrous water soluble stabilizer
- Small crochet hook
- Iron or heat press

Wind the bobbin with coordinating thread.

1. Hoop 2 pieces of the fibrous water soluble stabilizer for each piece.
2. Embroider all pieces of the design.
3. Rinse each design piece to dissolve the fibrous water soluble.
4. Lay flat on nonstick surface to dry
5. Iron or heat press designs to flatten them. Use a non-stick protective layer between the design pieces and the iron or heat press.

## Angel Assembly

1. Design 1605 (front body with head) and 1607 (the wings) are assembled by laying the 1607 under the 1605. Pull the tabs through the holes located in the middle of the bodies back (second & third hole down). You can use a crochet hook or your finger tip to pull them through.
2. Design 1605 (front body) and 1606 (back of the body) are attached back to back by lining up the tabs and holes. Pull each of the tabs through. There should be 6 on each side.
3. Assemble 1608 (sleeves and hands) to the front of 1605 (front body) using the 3 tabs and holes that are towards the top of the body. When done the Angel should stand on its own.
